Race against time to prevent deadly spread of polio (/university/colleges/mds/news/2014/05/race-against-time-to-prevent-deadly-spread-of-polio.aspx)

Poliomyelitis is a devastating, highly infectious viral disease. It is spread from person to person or through poor sanitary conditions. It can kill those infected or result in permanent paralysis to the limbs and chest. The best 'treatment' is prevention, and the best available means of prevention is vaccination.
