

About

The University of Birmingham is committed to being at the vanguard of academic-led drug discovery and the search for the next generation of therapies that will benefit humankind. Recently, the University of Birmingham has invested nearly three quarters of a million pounds to develop a High-Throughput Screening (HTS) facility. The Birmingham Drug Discovery Facility contains a number of cutting-edge technologies required to enable Birmingham scientists to conduct translational science.

We offer access to two fully automated [drug discovery platforms \(/facilities/bddf/platforms/index.aspx\)](/facilities/bddf/platforms/index.aspx) housed in the Drug Discovery Facility laboratory which is located in the School of Biosciences at the Institute of Microbiology and Infection (IMI).
