

Introduction to Development Projects

Modular value: 20 credits

Lecturer: John Watson

This module will introduce you the planning, analysis and delivery of small scale development projects.

The module is delivered via WebCT (our virtual learning environment), with hard copy materials, and extensive use of practical case studies. Students engage in structured group discussion board activities with the tutor.

Topics covered include:

- The project cycle
- Project identification
- From the logical framework to project accounts
- Valuing household projects and finalising the plan
- Organising the project and planning operations
- Procurement, contracting and control
- Project reporting and evaluation

Assessment

One time limited assignment (50%) and one 3,000 word assignment (50%).
