PREDNOS is a national multicentre randomised double blind trial of long-term tapering versus standard prednisolone (steroid) therapy for the treatment of the initial episode of childhood nephrotic syndrome. The aim of the trial is to compare the extended course tapering prednisolone regimen with the standard 8 week regimen and determine whether the extended course of prednisolone increases the time to first relapse in children presenting steroid sensitive nephrotic syndrome.

PREDNOS 2 is a national multicentre randomised double blind trial of short course daily prednisolone therapy at the time of upper respiratory tract infection (URTI) in children with relapsing steroid sensitive nephrotic syndrome (SSNS). The aim of the study is to evaluate the effectiveness of a six day course of daily prednisolone therapy at the time of URTI in reducing the development of subsequent nephrotic syndrome relapse in children with relapsing SSNS.

Plasma exchange and glucocorticoid dosing in the treatment of anti-neutrophil cytoplasm antibody associated vasculitis: an international randomised controlled trial. Multi-centre, international, open label, factorial design, randomized control trial in severe ANCA-associated vasculitis (AAV).
