

How to participate

For Health Professionals - Patient Recruitment

We are interested in recruiting the following groups of patients from collaborating centres:

1. Patients with a clinically diagnosed platelet defect(excluding known defects such as Bernard-Soulier, Glanzmann's disease and May Hegglin anomaly) regardless of their local platelet function testing results. If potential recruits have affected family members we would also be interested in recruiting the relatives.
2. Patients with inherited thrombocytopenia. If potential recruits have affected family members we would also be interested in recruiting the relatives.

If you are interested in participating please contact us:

Professor Steve Watson - Chief Investigator

or

Neil Morgan (Lecturer in Cardiovascular Genetics)

E: n.v.morgan@bham.ac.uk (<mailto:n.v.morgan@bham.ac.uk>)

We are happy to discuss potential participants on a case by case basis.
