- 4 systematic reviews:
  1. Aspirin Resistance - A systematic review of the diagnostic utility of tests currently available for the detection of aspirin resistance in patients with established cardiovascular or cerebrovascular disease.
  2. Stopping rule - The development and evaluation of a prognostic model and clinical decision rule to help decide on cessation of anticoagulant therapy in patients with idiopathic venous thromboembolism (VTE)
  3. Antiplatelet vs Anticoag treatment - Combined anticoagulation and antiplatelet therapy for high-risk patients with atrial fibrillation: systematic review and individual patient meta-analysis
  4. COPD
