

Industrial Challenges

The Birmingham Centre for Nuclear Education and Research understands that market advantage, technological progress and real impact occur when commercial need and research endeavor are combined.

We also recognize that industrial challenges are commercially sensitive and consequently, we frequently organise tailored one to one 'challenge led' meetings between industrialists and our experts. These meetings often result in our staff engaging with external organisations in consultancy or sponsored research.

Alta Innovations Ltd (<http://www.alta.bham.ac.uk/>) is the technology transfer company for the University of Birmingham and where required it provides the commercial framework for companies to access the world-leading consultancy and commercial research expertise at the University of Birmingham.

For more detail about our technical strengths, please follow the [Research Themes \(/research/activity/nuclear/research-themes/index.aspx\)](/research/activity/nuclear/research-themes/index.aspx) links.

If you are interested in having further discussions and working with us, please contact:
