

Plant and insect ecophysiology

Research into Plant and Insect Ecophysiology comprises the following areas:

- Climate change, insect overwintering and pest outbreaks ([Professor Jeff Bale \(/staff/profiles/biosciences/bale-jeff.aspx\)](/staff/profiles/biosciences/bale-jeff.aspx))
- Environmental modulation of plant growth; plant physiology ([Dr Jeremy Pritchard \(/staff/profiles/biosciences/pritchard-jeremy.aspx\)](/staff/profiles/biosciences/pritchard-jeremy.aspx))
