[Ukraine steels itself for winter as Novorossiya forges ahead \(http://theconversation.com/ukraine-steels-itself-for-winter-as-novorossiya-forges-ahead-33151\)](http://theconversation.com/ukraine-steels-itself-for-winter-as-novorossiya-forges-ahead-33151)

Written by Professor Stefan Wolff and Professor Tatyana Malyarenko (Professor of Public Administration at Donetsk State Management University). The EU-Asia Summit in Milan, Italy, delivered little, if any, tangible progress to resolve the crisis in Ukraine. Relations between Russia and Ukraine's major European allies remain just a few degrees above a new Cold War-style ice age. And with only a preliminary gas deal achieved between Kiev and Moscow this may be quite literally true for Ukrainians as winter approaches.

[The Conversation: Climate change: it's only human to exaggerate, but science itself does not \(http://theconversation.com/climate-change-its-only-human-to-exaggerate-but-science-itself-does-not-33150\)](http://theconversation.com/climate-change-its-only-human-to-exaggerate-but-science-itself-does-not-33150)

To exaggerate is human, and scientists are human. Exaggeration and the complementary art of simplification are the basic rhetorical tools of human intercourse. So yes, scientists do exaggerate. So do politicians, perhaps even when, as the UK's former environment secretary Owen Paterson did, they claim that climate change forecasts are "widely exaggerated". A more pertinent question is: does the way in which scientists and politicians speak publicly lead to wild exaggeration?

Written by Dr Gëzim Alpion. Few thought that Serbia's Euro 2016 qualifying fixture against Albania on October 14 2014 would be an easy match. But the depths to which it sank are shocking even to those familiar with the potency of anti-Albanian feeling among Serbia's nationalist factions.
