The high level of trust that had been constructed between western and Soviet leaders in the late 1980s and early 1990s was not sustained when western leaders had to face an independent Russia, even though the new Russia began with every intention of transforming itself into a full participating member of the international institutions set up after 1945 to keep the peace. However, Russians – not just their government – had come to view international institutions with profound distrust as having deceived them in both the economic and diplomatic spheres.
