About

PhD Title: Investigating phagosome maturation dynamics of *Streptococcus agalactiae* and *Cryptococcus neoformans*

Supervisors: Dr Robin C May, Dr Anne-Marie Krachler

I am currently researching Group B *Streptococcus* and *Cryptococcus neoformans* and the mechanisms these pathogens use to persist within macrophages, a key innate immune cell. Group B *Streptococcus* is the main cause of neonatal bacteraemia and meningitis. *Cryptococcus neoformans* causes devastating fungal infections with immuno-compromised individuals. With the use of markers for phagosome maturation, and some fluorescence microscopy, we hope to determine the molecular requirements for intracellular survival in these two pathogens.

Qualifications

MSci (Hons) Biological Sciences

Biography

My time as an undergraduate was spent right here in Birmingham, ending when I graduated in 2010 with an MSci in Biological Sciences. During my Third year I worked with Prof. Charles Penn on the function of the putative flagella biosynthesis gene *flhF* of *Campylobacter jejuni*. It was in my 4th year that I joined Robin's group, in which I am studying the intracellular survival of *Streptococcus agalactiae* in macrophages. After this project I couldn't bear the thought of leaving, so I managed to stay on for my PhD!

I am also a Teaching assistant in the School of Biosciences and organize the optional undergraduate module Biotechnology Masterclasses.

Research

Research group: Molecular Microbiology, May Lab

Research interests: Microbial pathogens, molecular biology, immunology and pathogenesis

Other activities

I am currently a Teaching Assistant for the school of biosciences, so I help a lot in workshops and practical sessions for undergraduates. I have also developed new electronic learning materials for undergraduate microbial modules. This academic year has also seen the launch of a new optional module for 2nd year undergraduates, proposed and organized by myself. This module is taught by postgraduate students and allows undergraduates to gain experience in advanced techniques used in the research laboratories within the school. I am also a language tutor for first year students and the postgraduate Society for General Microbiology representative for the school.

Biosciences Graduate School Committee (BGSC) Co-Chair
