Biography

BSc London Geology - 1970; PhD Marine Geophysics - Durham 1974. Senior Demonstrator, University of Durham 1973-1974. Lecturer in Geophysics, University of Keele 1974-1976. Lecturer in Geophysics, University of Durham 1977-1984. Professor of Geophysics, University of Birmingham 1984-. Head of the Department of Geological Sciences 1984-1988. Head of the School of Earth Sciences 1996-1999. Adjunct Senior Research Scientist (part-time) Lamont-Doherty Earth Observatory of Columbia University, USA. 1985-1999. During his research career, Graham Westbrook has held 28 research grants and contracts and he has participated in 22 marine geological and geophysical research cruises. He has taught a wide range of subjects at both BSc and MSc level in the fields of geophysics and tectonics.

Postgraduate supervision

Researchers supervised since 2005

S. Alexandry – (PhD) Classification and interpretation of seabed geology from analysis of combined sonar and acoustic profiling data. - (European Commission, and self)

H. Sherif – (PhD) Sequence stratigraphy of evaporites and their development in the late Triassic Ghadames-Berkine basin of North Africa. - (Libyan Government)

R. R. Haacke – (PhD) Multicomponent seismic investigation of elastic anisotropy and gas hydrates in the continental margin of west Svalbard. - (University, and Society of Exploration Geophysicists Ian Jack Postgraduate Scholarship)

R. J. K. Exley – (PhD) Seismic anisotropy in gas-hydrate bearing sediments and continental slope stability. - (NERC, CASE with Veritas DGC)

B. Jibrin (<http://www.gees.bham.ac.uk/staff/pgbwj620.shtml>) – (PhD) Analysis of fault curvature from 3D seismic data near the toe of the Niger Delta. - (Univation Limited)

A. Gailler – (Post-doc) Seismic analysis of the 3D structure and properties of fluid-escape chimneys in the Nyegga region offshore Norway. - (European Commission)

R. J. K. Exley - (Post-doc) Seismic analysis of the 3D structure and properties of fluid-escape chimneys in the Nyegga region offshore Norway. - (European Commission)

K. E. Thatcher (<file:///C:/staff/thatcherke.shtml>) – (Post doc) Modelling release of methane from gas hydrate in polar continental margins since the last glacial maximum. - (NERC)

Research

Research interests

- Geophysical investigations of the structure and tectonics of convergent plate boundaries, especially accretionary complexes
- Interaction between deformation, fluid pressure and flow, in sediments
- Gas hydrates in submarine continental margins

Current and recent research

Techniques for the Quantification of Methane Hydrate in European Continental Margins

This project developed and tested seismic techniques for detecting and quantifying the amount of methane hydrate in the sediments of continental margins. (European Commission), with C. Long, S. Peacock, R. Haacke (Birmingham University), T. Reston, M. Zillmer, E. Flueh (IFM-GEOMAR, Germany), J-P. Foucher, H. Nouzé, I. Contrucci, F. Klingelhoefer (IFREMER, France), A.I. Best, J.A. Priest (NERC Southampton Oceanography Centre) A. Camerlenghi, J. Carcione, G. Rossi, G. Madrussani, D. Gei (OGS Trieste, Italy), J. Mienert, M. Vanneste, S. Buenz (Tromsø University, Norway), S. Hetland (RF, Norway), R. Larsen, E. Habetinova (SINTEF, Norway), T.A. Minshull, S. Chand, C.R.I Clayton, S. Dean (Southampton University) web site: <http://hydratech.bham.ac.uk> (<http://hydratech.bham.ac.uk>).

Seismic anisotropy and slope stability on the flank of the Storegga slide

Seismic anisotropy was used to detect the presence of cracks in sediments on the flank of the Storegga slide off Norway, and their orientation and distribution was examined in relation to the stability of the submarine slope in which they occur. (NERC Ocean Margins LINK Programme), with R.J.K. Exley (research student) and S. Ronen (Veritas-DGC).

HERMES – Hotspot Ecosystem Research on the Margins of European Seas

This project, which is a component of HERMES, used high-resolution seismic techniques to investigate the 3D structure and properties of chimneys through which fluids, including gas, migrate to the sea floor. (FP6 European Commission), principal collaborators: R.J.K. Exley (Birmingham University), T.A. Minshull (NOC, Southampton) H. Nouzé, J.P. Foucher, S. Ker (IFREMER, France), and A. Plaza-Faverola (Tromsø University, Norway), web site: <http://www.eu-hermes.net> (<http://www.eu-hermes.net>).

Structure and tectonics of the accretionary wedge of the Gulf of Cadiz

An examination of the seismic and other evidence for recent deformation in this accretionary wedge. A megathrust event at the base of this wedge may have been responsible for the Lisbon earthquake and tsunami of 1755. (CNRS, France), in collaboration with M.A. Gutscher (IUEM, France).

Dynamics of gas hydrates in polar marine environments 2007-10

An investigation of the evidence for the release of methane gas hydrate in polar continental margins since the last glacial maximum, and an assessment of how much would be released by global warming in the future. (NERC), principal collaborators: K.E. Thatcher (Birmingham University), T.A. Minshull (NOC, Southampton), E. Nisbet (Royal Holloway, University of London), C. Berndt (IFM-Geomar, Germany), web site: <http://www.noc.soton.ac.uk/gg/IPY/index.html> (<http://www.noc.soton.ac.uk/gg/IPY/index.html>).
