About

School web page: web.mat.bham.ac.uk/C.W.Parker (<http://web.mat.bham.ac.uk/C.W.Parker>)

Qualifications

- BSc (Birmingham)
- MSc (Manchester)
- PhD (Mathematics, Manchester 1988)

Research

RESEARCH INTERESTS

My main research interests are in group theory.

Recently my research has been focussed on theorems designed to recognise simple groups from some fragment of their p -local subgroup structure. These theorems are intended to be used in the projects aimed at understanding the classification of the finite simple group. For example together with Stroth(Halle) and Rowley(Manchester), I have shown that many of the finite simple group can be identified from the structure of the centralizer of an element of order $3p$.

I am also interested in research which applies the classification of finite simple group. In work with [Kay Magaard \(/staff/profiles/math/magaard-kay.aspx\)](/staff/profiles/math/magaard-kay.aspx) (Birmingham) and Ben Fairbairn (Birkbeck) I have determined those quasisimple groups which can be used to construct a Beauville surface. I have also studied the commuting graph of a finite group and with my student Luke Morgan have shown that the diameter of a connected component of such a graph has diameter at most 10.

Publications
