About

Qianxi Wang is Lecturer of Applied Mathematics.

Qianxi has published over 20 research papers in scientific journals.

He studies on the motion of bubbles in a compressible liquid, with important applications in medical ultrasonics, sonochemistry and underwater explosion. He specialises in asymptotic perturbation methods, with application to the study of ground effect. He simulated nonlinear unsteady wave/body interaction using unstructured boundary integral method. He calculated N-body problem using fast-multipole-expansion.

Qualifications

- Ph D in Fluid Mechanics 1990
- BSc in Fluid Mechanics 1983

Biography

Wang Qianxi obtained his BSc and PhD in Fluid Mechanics from the University of Science and Technology of China (USTC) in 1983 and 1990 respectively. He had been a lecturer for two years at USTC.

He had been in Singapore for 12 years, mainly at the DSO National Laboratories of Singapore. He has joined the University of Birmingham at the beginning of 2006.

Teaching

- Viscous Fluid Mechanics
- Multi-variable Calculus
- Advanced Engineering Mathematics A & B

Research

RESEARCH THEMES

- Bubble dynamics in compressible liquids
- Ground effects using matched asymptotic expansions
- Unstructured BIM for water wave / body interaction
- N-body problem using fast multipole method (treecode)

Other activities

- Member of the Editorial Board of Journal of Hydrodynamics
- Member of the Active Editorial Board of Philosophic Nature
- Member of the Organizing Committee of the Conference of Global Chinese Scholars on Hydrodynamics (July 11-14, 2006 Shanghai, China)
- Member of the International Scientific Committee of the 7th International Workshop on Ship Hydrodynamics (Sept. 16-19, 2011, Shanghai, China)
