

After graduation and employability - School of Mechanical Engineering

As one of our Mechanical Engineering students, a huge and exciting array of career opportunities will be open to you when you graduate – both at home and abroad. You could pursue a career in one of the major manufacturing industries (the UK has the sixth largest manufacturing base in the world); or you could work in other areas of science and technology, such as sustainable energy. Other areas that favour the problem-solving skills you will acquire are finance, law and marketing as well as teaching and/or research.

 Mechanical Engineering graduates from the University of Birmingham had 93.3% graduate employability (Data is for UK Full-Time First degree leavers 2012/13).

Find out further details on the employability of our graduates:
