About

Title of PhD: Cognitive Assessment of Paediatric Neurodegenerative Disease

Supervisor: [Dr Andrew Olson \(/staff/profiles/psychology/olson-andrew.aspx\)](/staff/profiles/psychology/olson-andrew.aspx)

My research interests include the neuropsychological & neurophysiological assessment of metabolic neurodegenerative disease in children. These are a large and complex class of genetic disorders that result from the inactivity of one or more specific enzymes which are necessary in the normal development of the central nervous system. The primary aim is to explore the cognitive homogeneity and define the developmental trajectories within and across these disorders.

This is achieved through the construction of a neuropsychological test battery, designed specifically for children with metabolic disorders, which taps four cognitive domains: Memory, Language, Attention, and Motor Function. Establishing a test battery which is sensitivity to both developmental and neurodegenerative change is vital for assessing the impact of emerging novel therapies on improving cognitive function.

Qualifications

2007 - BSc Psychology: University of Bangor

2010 - MRes Brain Imaging & Cognitive Neuroscience: University of Birmingham

Research

Research interests

- Neurodegenerative populations
- Eyetracking
- Neurological imaging
