About

Debbie Allen is a postdoctoral researcher who works at the [Cerebra Centre for Neurodevelopmental Disorders \(http://www.cndd.bham.ac.uk\)](http://www.cndd.bham.ac.uk). She is currently funded by the National Autistic Society.

Qualifications

PhD, BSc

Working towards eligibility to sit exam to become a Board Certified Behavior Analyst

Biography

Dr Allen came to the University of Birmingham in 2003 after completing her PhD at Keele University. Previously she worked as a senior practitioner in a Community Learning Disability Team and as a program supervisor in Early Intensive Behavioural Intervention programs for young children with Autism.

Teaching

Recent teaching on UK Master Courses in Applied Behaviour Analysis

Postgraduate supervision

Currently Co-supervision with [Chris Oliver \(/staff/profiles/psychology/oliver-chris.aspx\)](/staff/profiles/psychology/oliver-chris.aspx).

Research

Dr Allen's research interests are mainly within the field of Applied Behaviour Analysis (ABA) with a particular interest in individuals with intellectual disabilities and rare genetic syndromes. More specifically, the assessment and treatment of challenging behaviour such as self-injury. Her other interests include:

- Staff / parent training
- General methodological issues in ABA
- Functional Analysis methodology
- Treatment integrity

Current Research

Remote Consultancy for Self-injurious Behaviour in Young Children with Autism: A pilot project. Funded by the National Autistic Society, September 2010-November 2011

This pilot project is designed to evaluate the effects and logistics of an external consultancy and staff training package on levels of self-injurious behaviour in children attending a specialist Autism school. Consultancy, which will be focused on data-based assessment, decision-making and intervention for self-injurious behaviour, will be delivered via email, telephone, web-based video consultation and limited site visits. The staff training package will be delivered during workshops (face to face and via video-conference). Other effects of the package will also be explored such as staff feelings of competency and level of knowledge when dealing with SIB pre and post-training

Past Research

- Early Intervention for Young Children at High Risk for Developing Severe Challenging Behaviour (May 2007). Funded by Baily Thomas Charitable Trust
- The Origins and Early Development of Self-Injurious Behaviour in Young Children with Severe Intellectual Disabilities (2003-2007). Funded by the Baily Thomas Charitable Trust
- The Origins and Early Development of Self-Injurious Behaviour in Young Children with Severe Intellectual Disabilities Follow-up (2007). Funded by the Baily Thomas Charitable Trust
- The Assessment of Self-injurious Behaviour in Children with Smith-Magenis Syndrome (2006-2007)
- Treatment Integrity in Early Behavioural Educational programs for Young Children with Autism. Funded by Autism and Developmental Disorders Education Research by way of PhD studentship (1999 – 2003)
