

Toward a nonphysicalist monist solution to the mystery of consciousness

This project is conducted by Max Velmans (Goldsmiths, University of London) and [Yujin Nagasawa \(/staff/profiles/philosophy/nagasawa-yujin.aspx\)](/staff/profiles/philosophy/nagasawa-yujin.aspx) and funded by the John Templeton Foundation.

This is the first major interdisciplinary research project to establish nonphysicalist monism as an empirically validated and conceptually rigorous hypothesis and explore its application to the perennial mystery of phenomenal consciousness.
