The contribution of our research students is integral to the academic and community life of the School of Social Policy. Students come from a wide range of backgrounds, some straight from undergraduate degrees, others having worked in social and health care, education, youth work, criminal justice, community work, faith-based organisations, national and local government and the voluntary sector. The School also has a tradition of hosting visiting international research students from the USA and Eastern Europe, as well as an established tradition of supervising research students with a range of disabilities, who are also service users.

### Institute of Applied Social Studies
