About

Vanessa Heggie is a University Research Fellow.

Vanessa is a historian of modern science and medicine, with a particular interest in the history of nineteenth and twentieth century health and life sciences. She has published a book on the history of sports medicine, and over a dozen papers on a range of topics from Victorian nursing and public health, to the science of mountaineering. Vanessa is currently working on the history of physiology and scientific exploration.

You can hear her talking about her research in this [Ideas Lab Predictor Podcast \(https://audioboo.fm/boos/1843101-dr-vanessa-heggie-expedition-physiology-the-history-of-medical-research\)](https://audioboo.fm/boos/1843101-dr-vanessa-heggie-expedition-physiology-the-history-of-medical-research).

She has been awarded a range of grants and awards, including a Mellon Teaching Fellowship, and grants from the Isaac Newton Trust and the Wellcome Trust.

She is also the co-author of The H-Word, a blog about the history of science hosted by the Guardian.

Qualifications

- PhD History of Medicine, 2004
- MSc History of Science, Technology and Medicine, 2001
- BSc (Hons) Genetics, 2000

Biography

Vanessa studied genetics as an undergraduate at the University of Manchester, before going on to graduate study in the History of Science and Medicine at the Centre for History of Science, Technology and Medicine (CHSTM) in Manchester.

Her PhD (2004) was a study of Victorian and Edwardian ideas about health and fears about degeneration, including studies of the Vegetarian Society and local immigrant populations. This led to a Research Associateship on a Wellcome Trust project exploring the history of sports medicine at CHSTM which resulted in her first book 'A History of British Sports Medicine' (Manchester University Press, 2011).

Vanessa then took up a series of teaching and research posts at the Department of History & Philosophy of Science, University of Cambridge, funded by the Mellon Foundation, Isaac Newton trust, and Wellcome Trust

Research

In its broadest sense, Vanessa's research concentrates on understandings of the human body and its interaction with the social and natural environment. This includes an examination of categories (e.g. sex, race) and boundaries (e.g. healthy/unhealthy, pathological/normal).

In particular she works on the history of modern western medicine, c.1850 to present day, and affiliated sciences, especially the history of physiology and of public health. She is currently working on a second book 'on the ways in which athletes and sportsmen have been involved in medical experiments and scientific studies in the nineteenth and twentieth centuries.

Vanessa is also researching into the history of scientific exploration – particularly the development of extreme physiology, wilderness medicine, and the role of science and medicine in expeditions to extraordinary environments (high-altitude, polar regions, etc.)

Publications

Books:
