About

Nick is a Senior Research Fellow within the Interdisciplinary Research Centre in Materials Processing in the School of Metallurgy and Materials where he manages the portfolio of European Union funded projects.

He is the senior scientist working on the **[AccMet, Hysop and Exomet projects \(/research/activity/irc-materials-processing/themes/AMPLab/AMPLab-Projects.aspx\)](#)**.

He has twice been shortlisted for the best European Union funded project award and is a Fellow of the Institute of Materials, Minerals and Mining.

Current research interests include combinatorial metallurgy, additive manufacturing, powder processing, gas atomisation, noble and base metal catalysis, niobium silicides, metal matrix nano-composites, spray casting and net shape HIP processing.

Qualifications

- BSc (Hons.) in Chemistry, Loughborough University, UK, 1982
- Ph.D in Rapid Solidification Processing, University of Surrey, 1986
- Fellow of the Institute of Materials, Minerals and Mining

Research

Additive manufacturing (DLF – blown powder and SLM – powder bed)

Laser processing of metals

Powder processing

Rapid solidification

Niobium silicide

Metal matrix nano –composites

Raney catalysts

Publications

Exhibitions:

Exhibit in London Science Museum in the "Science in Space" display (2008 to present).

Patents:

WO 97/25750 Method of manufacturing electrodes by gas atomisation of molten metals (EP 0871983 B1, filed 27.12.96, granted 03.05.00)

US 7094729 Raney Catalyst Preparation by Gas Atomization of Molten Alloy (filed 04.04.01, granted 22.08.06)

Patent Applications:

WO/2009/101394 High Surface Area Metal Production (filed 10.02.2009)
