About

Clive Ponton is a Senior Lecturer in the School of Metallurgy and Materials, and the School's Head of Quality Assurance, Third Year Undergraduate Tutor, and UG Research Project Coordinator.

He has published over 150 research papers in the field of metallurgy and materials science, and is a co-inventor on 6 patents (2 with Rolls-Royce plc), and has given conference presentations nationally and internationally (including invited talks) in Europe, USA and Japan.

His research at the University of Birmingham has been/is supported by various industrial companies (for fully funded confidential company research, or partial funding in support of EPSRC/TSB/EU research programmes etc.) such as Rolls-Royce, Morgan Materials, Sandvik; Government funding agencies such as the Civil Aircraft Research and Technology Demonstration (CARAD) programme, DTI (now TSB), EPSRC; other funding bodies such as the Royal Society, EICF, etc.

Clive is enthusiastic about teaching materials science (ceramics, metals and polymers) to both undergraduate and graduate students.

Qualifications

- CEng, 1990
- MIMMM, 1990
- PhD and DIC, Materials Science, University of London and Imperial College, 1987
- BSc(Eng) and ARSM, Metallurgy & Materials, University London and Imperial College, 1983

Biography

Clive Ponton graduated with a BSc(Eng) and ARSM in Metallurgy and Materials from Imperial College London in 1983.

He went on to do postgraduate research on the Mechanical Properties of Glass-Ceramics in the System $\text{CaO-MgO-Al}_2\text{O}_3\text{-SiO}_2$ and in 1987 was awarded a PhD and DIC from Imperial College/University of London, as well as the 1987 Matthey Prize by the Department of Materials (Imperial College London) for the best PhD thesis. In 1987, he was also directly elected as a Member of the Institute of Ceramics (MICeram) [Institute of Ceramics now subsumed into IMMM].

Clive carried out postdoctoral research as an EPSRC Research Fellow for from 1987 to 1989, working on the development of new bioactive apatite-containing glass-ceramics.

In 1989, he was appointed as a Lecturer in Ceramic Engineering in the School of Metallurgy and Materials at the University of Birmingham.

In 1990, Clive was awarded the Pfeil Medal and Prize (co-awardee, Prof. RD Rawlings) for published work of particular merit in the field of ceramics, and also conferred Professional Membership of IOMMM (MIMMM) and Chartered Engineer (CEng) status.

In 1996, he was promoted to Senior Lecturer in the School of Metallurgy and Materials at the University of Birmingham.

Teaching

Undergraduate Degree Programmes

- BEng Materials Science and Technology
- BEng Metallurgy
- MEng Materials Engineering
- BEng/MEng Materials Science and Engineering with Business Management
- BEng/MEng Materials Science and Energy Engineering
- BEng/MEng Mechanical and Materials Engineering
- BSc Sports and Materials Science
- BMedSci Biomedical Materials Science

Level H (Year 3) Modules

- Control of Microstructure

- High Toughness Ceramics
- Biomaterials
- Research Project
- Advanced Materials (Bio Med Sci)

Level I (Year 2) Modules

- Functional and Ceramic Materials A: Energy and Communication
- Functional and Ceramic Materials B: Transport and Environment

Level C (Year 1) Modules

- Mechanics and Materials in Sport

Postgraduate supervision

To date all 25+ PhD students supervised/co-supervised by Clive have been awarded a PhD.

Research

RESEARCH ACTIVITY:

Nano- and micro-scale science and technology

- Aqueous corrosion of metals at high temperature and pressure (with Dr Brian J. Connolly)
- Oxide glaze formation during high temperature bearing wear (with Dr Phil Wood [Royal Society Industrial Fellow] and Prof. Hugh E. Evans)

Synthesis / colloidal processing of non-metallic and metallic nanoparticles

- Development of stable ceramic sols
- Electrophoretic deposition of ceramic nanoparticles

Fabrication of Micro- and Nano-Particulate-based structures

- Development of electrically conductive materials for electrophoretic deposition substrates

RESEARCH THEMES

Nano- and micro-scale science and technology

- Complex oxides
- Oxidation of metals and non-oxide ceramics to produce oxide films
- Nanoscale phase distribution
- Core-shell composite nanoparticles
- Dispersed particle systems
- Engineered nanocomposites

Synthesis / colloidal processing of non-metallic and metallic nanoparticles

- Low temperature (<400°C; typically < 230°C) synthesis routes for producing non-metallic and metallic nanoparticles (5 nm - 500 nm 'mesoscale' size range) such as:
- Hydrothermal synthesis/processing
- Emulsion synthesis/processing
- Solvothermal synthesis/processing
- Other chemical synthesis/processing routes

Fabrication of Micro- and Nano-Particulate-based structures

- Electrophoretic deposition/infiltration of nanoparticles
- Pressure filtration of colloidal suspensions/slurries
- Micro/nano-engineered structures and composites
- Multi-phase structures
- Mixed inorganic/organic/metallic structures
