

Additional Physics Skills

School of Physics and Astronomy

College of Engineering and Physical Sciences

Details

Code 23831

Level of study First Year

Credit value 10

Semester 1

Module description

This module is designed to assist students in their understanding of the relationship between different areas of physics, the application of this understanding to the solution of real life problems and the communication skills needed to convey their knowledge to others. Students also gain skills in the use of a commercial mathematical analysis package and a formal programming language.
