

Example of content cupboards

Content cupboards are used where there is a lot of information on a page and they can make pages easier for users to view relevant information.

The following examples show three ways you can use a content cupboard. For text only, for text and pictures or adding a video.

They can only be added to the main column of the page.

Content Cupboard 1

[Open all sections](#)

Information can be added in here including pictures videos and so on.

Content Cupboard 2

Content Cupboard 3
