It is by now widely accepted that phraseological units, mainly collocations, are essential for a person’s fluency (Pawley & Syder, 1983; Lewis, 1993). By extension, their knowledge is fundamental to translators who should have an excellent command of the pair of languages they work with. However, there are hardly any bilingual reference sources where students or translators can search for unknown collocations in the target language, one exception being Benson & Benson’s *A Russian-English Dictionary of Verbal Collocations* (1993). A survey (Tagnin, 1998) of how nine English verbal collocations and their Portuguese equivalents have been treated in nine standard dictionaries, both monolingual English and bilingual English-Portuguese (Sinclair, 1987; Procter, 1995; Longman, 1995; Vallandro & Vallandro, 1976; Houaiss & Avery, 1964; Houaiss, 1982; Macmillan, 2002; Jelin, 2006) (Oxford, 2002), and in three Brazilian dictionaries, two bilingual and one monolingual (Houaiss & Avery, 1964; Taylor, 1982; Ferreira, 1975) showed that these collocations have not received systematic treatment, which makes it very difficult to find the desired collocation.

Table 1: Verbal collocations looked up in various dictionaries

First of all, they may be listed under the verb, which is most often the case, or under the noun. It might be appropriate to list a verbal collocation under the verb in a dictionary aimed at the comprehension of language but not in one aimed at production. Usually a speaker or writer knows the noun, the referential lexeme, but might not know the verb that goes with it. For that reason, verbal collocations should come under the noun, as Hausmann (1985) has already claimed, for the noun is the base in a verbal collocation. Besides, only very rarely are verbal collocations listed as an entry in their own right. Mostly, they are either listed as a subentry, or in the definition or still as part of an example, but sometimes not highlighted in any form.
This paper will discuss the compilation of a bidirectional English-Portuguese/Portuguese-English dictionary of verbal collocations, which encompass the following structures:

- **V (Det) N** – *make trouble, make an impression*
- **V + Prep + N** – *come into force, keep in touch*
- **V + Adj** – *get rich, go wrong*

It will report on the early pre-corpus stages of the project, when examples were collected from books, magazines and newspapers to the present time when citations were extracted from corpora, mainly the *Contemporary Corpus of American English* (COCA) (Davies, 2016), the *Corpus do Português* (Davies & Ferreira, 2016) and the *Corpus Brasileiro* (Berber Sardinha, 2016). For some specific collocations the internet was searched. The paper will also discuss decisions that had to be made, such as (1) ‘is this a collocation?’; (2) ‘is frequency the only criterion for a combination to be considered a collocation?’; (3) ‘is this collocation too specialized to be included in a general dictionary?’; (4) ‘is this a good example, does it make the meaning clear?’; (5) ‘how can we find a good equivalent?’; (6) ‘should cognate verbal collocations be included?’; (7) ‘how do we account for verbal collocations for which the equivalent is not a collocation?’

These are some of the answers we came up with:

1. For a combination to be considered a collocation it must present some type of lexical restriction: *give a book* is not a collocation because *give* in this sense means to hand something over to someone and it can combine with any object, such as *give a book, give a pencil, give a present, give a dress* etc. However, *give a paper* at a conference has a very specific meaning and is thus considered a collocation.

2. Frequency is not always the sole criterion, exclusivity (Brezina, McEnery, & Wattam, 2015, p. 140) is equally relevant. The Portuguese word for *doubt*, *dúvida*, collocates with *esclarecer* (*clarify*) 2730 times in the *Corpus do Português: Web/Dialect* but only 321 with its synonym *dirimir*. Nevertheless, DÚVIDA is the most common collocate of DIRIMIR, which qualifies the combination as a collocation. The same may be said for *FURL* which, though not a frequent verb, combines mostly with some type of sail: *Scouts untied lines, furled sails, dropped anchor. I went aloft to furl the mainsail in a blow.*

3. This can be a tricky question, but we have decided to only include specialized collocations which are known to the general public or, as the editors of the *Oxford Collocations dictionary for students of English* have put it, to the “educated non-specialist” (Oxford Collocations Dictionary, 2002, p. ix). So, for instance, *score a goal* has been included, while *jump offside* has not. By the same token, everyday legal collocations such as *file/settle/dismiss a lawsuit* are also listed.

4. We have attempted to use examples that make the meaning clear because the dictionary does not include definitions. For instance, *Tom, you bring up a point that I brought up a few weeks back* does not offer enough
context for the user to infer the meaning of bring up a point, whereas While I doubt this is true, it does bring up a point I want to discuss does.

(5) Finding a good equivalent can be difficult at times for various reasons: the collocation in language A is not translated by a similar collocation in language B. Whereas crash a party is a V + N collocation, its Portuguese equivalent, ‘entrar de penetra numa festa’ is not actually a collocation as we have defined it. Some collocations are translated by a single verb, like go sour whose equivalent is simply ‘azedar’. More often than not nouns are quite different across languages: make arrangements becomes ‘tomar providências’ in Portuguese. In such cases one has to rely on one’s own knowledge of both languages or resort to searches in monolingual or even bilingual parallel corpora (Tagnin, 2007).

(6) We have opted to include cognate verbal collocations because they may differ in their inclusion or not of a determiner, for instance. Make a difference requires some kind of determiner, while in the Portuguese translation, ‘fazer (uma) diferença’, the determiner is not compulsory.

(7) Because this is a bidirectional dictionary, the verbal collocation will only be listed in the source language, that is, if it is a verbal collocation in English but not in Portuguese, there will be an entry for it in the English-Portuguese direction, but not in the reverse direction. For example, go sour will have an entry in the English-Portuguese direction with its equivalent ‘azedar’, but ‘azedar’ will not be an entry in the other direction as it is not a verbal collocation.

Here are two sample entries, one in each direction. Please note that the example for the equivalent in the target language is not a translation of the example in the source language; it is always an authentic rendition in its own right.
