

## **Transcript – Civil Engineering Video - MSC Students**

**MSC Student 1:** Studying here is very interesting because the students here are very diverse, so you get to learn about other cultures. We get a very wide exposure to the field that we are studying in and that is very important.

**MSC Student 2:** You learn a lot here, I got self confidence here. My language was a complete change from Persian to English. Everything was completely different, but the university really helped me through all of my problems. I would definitely recommend it to people to come and study here, I really enjoyed it.

**MSC Student 1:** The lecturers, they allow the students to be developed themselves – they don't do the work for you, they'll guide you and give you that opportunity to get something done for yourself. I think that's very very good.

**MSC Student 2:** I'm going to study my PHD here. They really give you the opportunity to learn. I'm really glad I'm going to stay here for another three years.

**MSC Student 1:** Not only do they have a good academic team here, but a diverse culture that is here – they are operating in a global environment. You can interact and work as a team with people from just about anywhere in the world. Coming here is an advantage.
