

## A randomised placebo-controlled trial of mifepristone and misoprostol versus misoprostol alone in the medical management of missed miscarriage

### Inclusion criteria

- Women diagnosed with missed miscarriage by pelvic ultrasound scan in the first 13+6 weeks of pregnancy that choose to have medical management of miscarriage.
- Age 16 years and over.
- Willing and able to give informed consent.

### Exclusion criteria

- Women opting for alternative methods of miscarriage management (expectant or surgical).
- Diagnosis of incomplete miscarriage.
- Life threatening bleeding.
- Contraindications to mifepristone or misoprostol use.
- Participation in any other blinded, placebo-controlled trials of investigational medicinal products in pregnancy.

**Proposed recruitment period: June 2017 to June 2019**

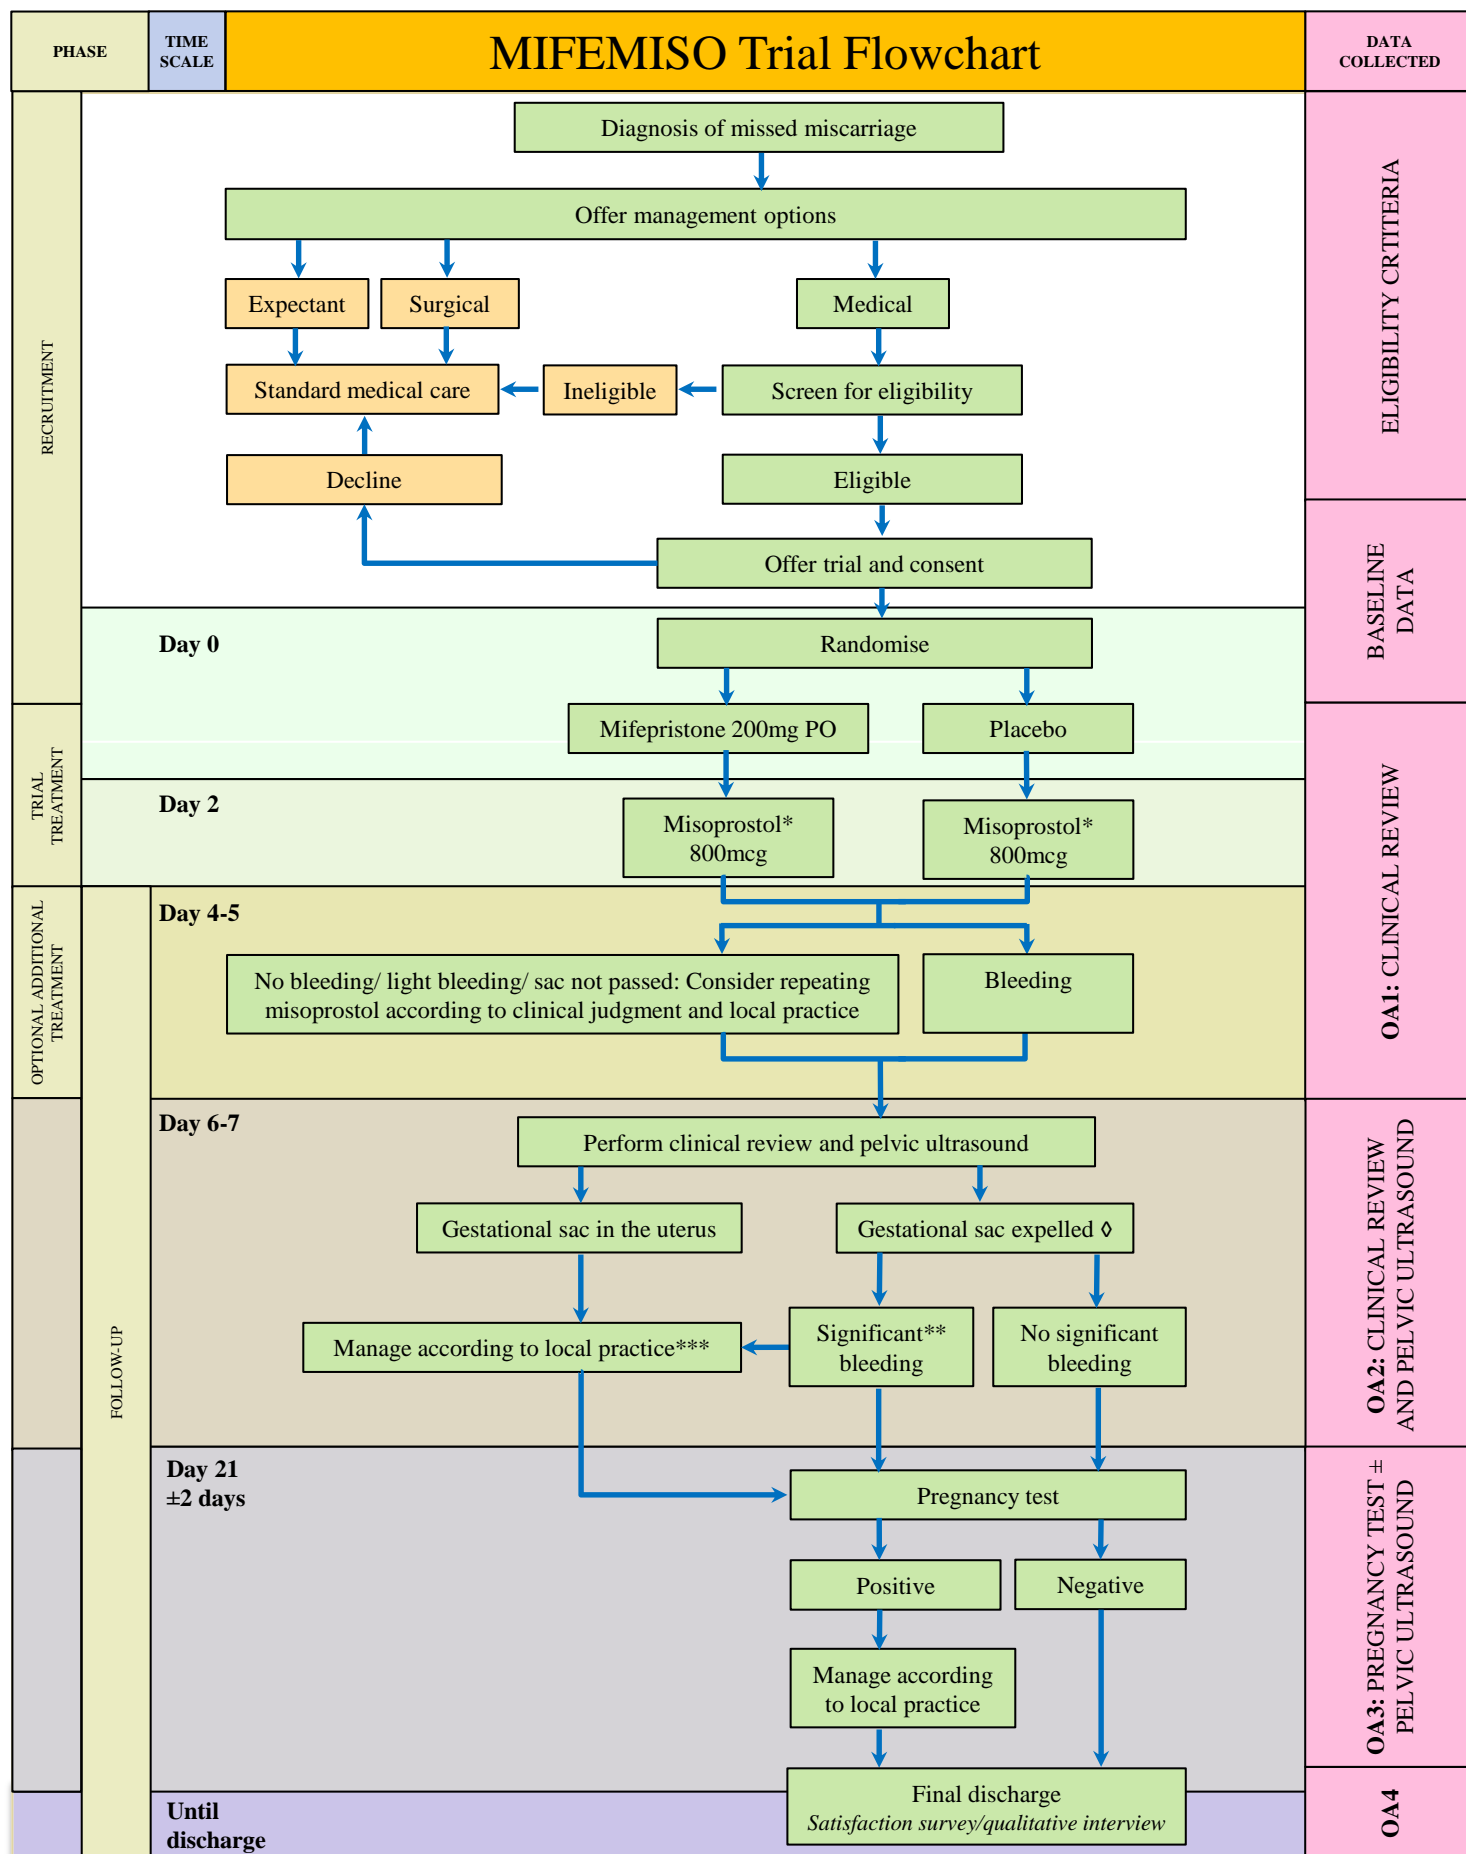

**Target recruitment at each site: 3-4 patients per month**

**If you are interested in participating as a recruiting centre**

**please get in touch**

◊Primary Outcome

\*If gestation sac has been passed before the scheduled time for misoprostol, misoprostol can be omitted

\*\*According to clinical judgment

\*\*\*Advice: Avoid surgical evacuation unless clinically indicated
