The importance of mental health for research staff during the COVID-19 pandemic

We’re all aware of the impact COVID-19 has had on mental health. Research only staff (e.g., post-docs, research assistants) are a group who may experience unique challenges that may place them at particularly at-risk for mental health difficulties. Research only staff face numerous challenges at the best of times, including the uncertainty of fixed-term contracts and the need to establish independence.

COVID-19 has brought new challenges for us all. Research staff may feel particularly isolated if living away from loved ones and they aren’t able to/feel uncomfortable returning to campus to work.

What resources are available to support ECRs mental health?

University of Birmingham

There are a number of resources available for mental wellbeing

- **Workplace wellbeing.** Workplace Wellness provides a 24/7 helpline for immediate emotional support, debt management services, general advice and information. Helpline number: 0800 1116 387
- ‘Five Ways to Wellbeing’ to improve both your physical and mental health
- **COVID-19** specific wellbeing support, including wellbeing whilst working remotely
- The College of Social Sciences has some great resources, including regular online yoga and mindfulness sessions
- The College of Life and Environmental Sciences has a well-being canvas page which although is predominantly aimed at students, can also be accessed by LES staff
- UoB’s staff reward programme, Perks at Work, also has some great free online courses available through the Community Online Academy, ranging from yoga and dance to leadership and resilience
**External resources**

There are also really helpful external resources, such as:

- [Mind](https://mind.org.uk)
- [Samaritans](https://www.samaritans.org). Call 116 123 for 24/7 support.

---

**The SPRINT project resources**

At the SPRINT project, based in the School of Sport, Exercise and Rehabilitation Sciences, we are interested in applying techniques derived from sports psychology to novel contexts. As a response to COVID-19, we have developed interactive, online resources to help you take ownership over your own wellbeing.

You can also visit our [blog page](https://www.sprintproject.org/blog) where we regularly discuss these topics.

1. **Goal setting**
   Use different tools and resources to set personal goals that can help you take progressive steps to achieve your ambitions.

2. **Strengths profiling**
   Identify your personal strengths, think about those you'd like to build upon and consider how they can benefit both you and those around you.

3. **Emotional awareness**
   Build your awareness of different emotions and begin to understand how we can manage them.

4. **If-Then planning**
   Make a plan for how to deal with stressful situations that may arise in the future. By practising how to plan effectively, you can learn new coping strategies, work towards achieving your goals and improve your overall resilience.

5. **Coping: part 1 and part 2**
   Develop effective strategies for coping with stressful situations. These pages will help you to identify the advantages and disadvantages of different coping strategies and practice the technique of reframing to develop a more positive mindset.

6. **Grounding techniques**
   Grounding techniques help bring us back to the present moment and can help reduce feelings of anxiety and being overwhelmed. We have created a variety of infographics so pick whichever one works for you.

7. **Dream Team**
   Identify and reflect on different types of social support and how they can benefit you.
