

An antipsychotic

Sulpiride (sul-pee-ride)

You should read this leaflet with your carer/care giver.

Sulpiride:

- Is also called Dolmatil, Sulpitil or Sulpor.
- Come as tablets or liquid.

- Sulpiride is used for schizophrenia and psychoses.
- Sulpiride is sometimes used for people who are distressed. There is no clear evidence that it improves someone's behaviour.

The label on your sulpiride packet should tell you when and how much medicine to take.

Swallow your tablet or capsule with water or measure and swallow the liquid.

If you forget to take your medicine, tell someone straight away.

You should carry on taking your medicine even if you feel better unless your doctor asks you to stop.

Drinking alcohol whilst taking sulpiride could make you feel sleepy.

Some medicines do not work well together.

You should tell your doctor about any other medicines you are taking.

Side effects:

- Medicine can have certain effects on your body that are not wanted.
- Not everyone taking a medicine will get them.
- Many will go away with time.
- Many are rare.

You might want to talk to your doctor or the pharmacist or your key worker if you have any side effect.

These are some (but NOT all) side effects of sulpiride...

- Constipation or upset tummy
- Feeling more restless and agitated
- Feeling stiff or have shakes in hands and body
- Putting on weight (check weight regularly)
- May increase your blood fat (cholesterol) (check blood test)
- May increase your blood sugar level (check blood test)
- May lead to diabetes (check blood test)
- May affect your heart function (check ECG)
- You may lose interest in sex
- Headache

- In women, menstrual periods may change (check blood test)
- Men may develop breasts and, in both men and women, there may be secretion of breast milk (check blood test)

Some side effects are more serious.

You should tell someone straight away if you have...

- High temperature and stiffness (check blood test)
- Shaky movements in face, mouth, arms and legs
- Sweating and loss of senses (check blood test)

You should talk to your doctor before you stop taking your medicine.

Sometimes, if you stop taking your medicine, you may have:

- Vomiting
- Problems sleeping
- Sweating a lot
- Restlessness and anxiety

This leaflet does not tell you everything about sulpiride.

You can get more information from:

- your pharmacist, doctor, nurse or carer/ care giver
- check <http://www.choiceandmedication.org/cnwl/>
- NHS on 111
- medicine information helpline on 020 3317 5090.

This leaflet can be downloaded free of charge from:
