12th May 2020

Dear Kathryn,

Full title of study: A phase III, 2 arm, multi-centre, open label, parallel-group randomised designed clinical investigation of the use of a personalised early warning decision support system with novel saliva bio-profiling to predict and prevent acute exacerbations of Chronic Obstructive Pulmonary Disease

Short Title: Predict&Prevent AECOPD

REC ref: 19/LO/1939

Protocol Number: 833757

IRAS Project ID: 261576

Chief Investigator: Professor Alice Turner

Sponsor: University of Birmingham

I am writing to inform you that the following documents have been amended and form substantial amendment 01.

- Protocol V4.0 Vd04-May-2020
- Patient Information Sheet V4.0 Vd04-May-2020

The major change outlines that there will only be two CRP samples collected during the baseline period to form a baseline state as opposed to three.

In addition, to these documents, a consent video has been prepared; this video answers queries that arise during the consent process. The video will be used across several platforms as a tool for patients to address concerns before giving consent. This is to streamline the consent process however, it will not replace it entirely.

Yours sincerely,

Professor Alice Turner,

Reader in Respiratory Medicine
