

CERCLAGE SUTURE TYPE FOR AN INSUFFICIENT CERVIX AND ITS EFFECT ON HEALTH OUTCOMES (C-STICH)

CAN YOU HELP US?

**IF YOU ARE HAVING A CERVICAL CERCLAGE PLEASE SPEAK TO
YOUR DOCTOR ABOUT C-STICH**

- There are two types of threads commonly used for cervical stitches (single strand or woven).
- It is not yet known which thread is better.
- This hospital is therefore taking part in a study called C-STICH, which will tell us which thread is best and will hopefully reduce the number of babies that are born too soon.

For more information please contact:
Local Clinician or Midwife
